JOURNAL OF DAIRY RESEARCH

EDITED BY

M. ELISABETH SHARPE, PH.D., D.SC., F.I.BIOL.
National Institute for Research in Dairying,
Shinfield, Reading, Berkshire, RG2 9AT

A. K. MARTIN, PH.D., A.R.I.C.
The Hannah Research Institute, Ayr, KA6 5HL

Assistant Editors

A. T. ANDREWS, M.A., D.Phil.
B. F. BONE, B.A., A.L.A., A.I.Inf.Sc.
L. W. PHIPPS, B.Sc., Ph.D.

Editorial Assistant

MRS DOROTHY SKIDMORE

Secretary

J. C. F. COLES

VOLUME 43, 1976

CAMBRIDGE UNIVERSITY PRESS

PUBLISHED BY
THE SYNDICS OF THE CAMBRIDGE UNIVERSITY PRESS
The Pitt Building, Trumpington Street, Cambridge, CB2 1RP
Bentley House, 200 Euston Road, London, NW1 2DB
32 East 57th Street, New York, N.Y. 10022

Printed in Great Britain at the University Printing House, Cambridge

Contents

No. 1 (February 1976)

PAGE

The effect of frequency of feeding on milk secretion in the Ayrshire cow. P. C. Thomas and M. E. Kelly 1

Artificial induction of lactation by hypothalamic implantation of perphenazine in virgin goats. G. Vandeputte-van Messom, G. Peeters and H. Lauwers 9

Dephosphorylation of bovine casein by milk alkaline phosphatase. D. Lorient and G. Linden 19

Moving boundary electrophoresis of native and rennet-treated casein micelles K. N. Pearce 27

A comparison between the amino acid compositions of 2 chymosin-sensitive polypeptides and C-terminal segments of κ-casein. R. Beeby . . 37

Aggregation of whey proteins during storage of acidified milk. P. J. Argyle, N. Jones, R. C. Chandan and J. F. Gordon 45

Effect of storage on the electronic cell count of milk. A. W. M. Sweetsur and J. D. Phillips 53

Acetaldehyde: an intermediate in the formation of ethanol from glucose by lactic acid bacteria. G. J. Lees and G. R. Jago 63

Formation of acetaldehyde from threonine by lactic acid bacteria. G. J. Lees and G. R. Jago 75

Immunochemical, chromatographic, and milk-clotting activity measurements for quantification of milk-clotting enzymes in bovine rennets. G. A. L. Rothe, N. H. Axelsen, P. Jøhnk and B. Foltmann 85

Contribution of rennet and starter proteases to proteolysis in Cheddar cheese. R. B. O'Keeffe, P. F. Fox and C. Daly 97

Microstructure of Cheddar cheese: sample preparation and scanning electron microscopy. M. F. Eino, D. A. Biggs, D. M. Irvine and D. W. Stanley 109

A comparison of microstructures of Cheddar cheese curd manufactured with calf rennet, bovine pepsin, and porcine pepsin. M. F. Eino, D. A. Biggs, D. M. Irvine and D. W. Stanley 113

The effect of non-starter bacteria on the chemical composition and the flavour of Cheddar cheese. B. A. Law, M. Castañón and M. E. Sharpe . . 117

Further studies on acid phosphatase of leucocyte origin in normal and mastitic bovine milks. A. T. Andrews 127

α_{s_0}-Casein: its preparation and characterization. W. Manson, W. D. Annan and G. K. Barnes 133

PAGE

Fatty-acid composition of Reichert-Meissl and Polenske fractions in butterfat. L. Laruelle, M. van Dijck and P. Daenens 137

Review of the progress of Dairy Science: Cheese starters. R. C. Lawrence, T. D. Thomas and B. E. Terzaghi 141

No. 2 (June 1976)

Retirement of Dr C. C. Thiel 195

Acetate utilization by the isolated perfused guinea-pig mammary gland, T. B. Mepham, S. R. Davis and J. R. Humphreys 197

Variations in the susceptibility of lactating and non-lactating bovine udders to infection when infused with *Escherichia coli*. A. J. Bramley . . 205

Effect of feeding fat to dairy cows receiving a fat-deficient basal diet: I. Milk yield and composition. W. Banks, J. L. Clapperton, M. E. Ferrie and A. G. Wilson 213

Effect of feeding fat to dairy cows receiving a fat-deficient basal diet: II. Fatty acid composition of the milk fat. W. Banks, J. L. Clapperton and M. E. Ferrie 219

Carotene and immunoglobulin concentrations in the colostrum and milk of pasture-fed cows. D. F. Newstead 229

Autoxidation in milk rich in linoleic acid: II. Modification of the initiation system and control of oxidation. G. S. Sidhu, M. A. Brown and A. R. Johnson 239

Enzymic methods for estimation of the somatic cell count in bovine milk: I. Development of assay techniques and a study of their usefulness in evaluating the somatic cell content of milk. B. J. Kitchen . . . 251

The quantitative measurement of whey proteins using polyacrylamide-gel electrophoresis. R. M. Hillier 259

Heat stability of forewarmed milks; influence of κ-casein, serum proteins and divalent cations. P. A. Morrissey and F. O'Mahony 267

Autolysis of *Streptococcus cremoris*. L. Mou, J. J. Sullivan and G. R. Jago . 275

Cytochemical observations on the extracellular carbohydrate produced by *Streptococcus cremoris*. B. E. Brooker 283

Amino acid nutrition of some commercial cheese starters in relation to their growth in peptone-supplemented whey media. B. A. Law, Emel Sezgin and M. E. Sharpe 291

The contribution of starter streptococci to flavour development in Cheddar cheese. B. A. Law, M. J. Castañón and M. E. Sharpe 301

The production of sulphur compounds in Cheddar cheese and their significance in flavour development. D. J. Manning, H. R. Chapman and Z. D. Hosking 313

PAGE

Influence of temperature on the electrical conductivity of buffalo milk. G. S. Sharma and N. K. Roy 321

Composition of ewe's milk. A. P. Williams, D. R. Bishop, J. E. Cockburn and K. J. Scott 325

The role of α-lactalbumin in the primary phase of chymosin action on heated casein micelles. S. I. Shalabi and J. V. Wheelock 331

Review of the progress of Dairy Science: Continuous cheese-making. N. J. Berridge 337

No. 3 (October 1976)

The influence of dietary protein intake on milk production and blood composition of high-yielding dairy cows. R. J. Treacher, W. Little, K. A. Collis and A. J. Stark 357

Reproducibility of electronic cell counts in milk; a study of 5 further factors. D. O. Greer and J. K. L. Pearson 371

Compositional and electrophoretic changes in buffalo milk-fat globule membrane proteins during lactation. Sukhminder Singh and N. C. Ganguli . 381

A study of cow's milk containing high levels of linoleic acid: isolation and properties of the fat-globule membrane. R. W. Sleigh, J. M. Bain and R. W. Burley 389

Isolation, preparation and the amino acid composition of 4 milk-fat globule membrane proteins solubilized by treatment with sodium dodecyl sulphate. T. E. Cawston, M. Anderson and G. C. Cheeseman . . . 401

Heat-induced changes in sulphydryl and disulphide levels of β-lactoglobulin A and the formation of polymers. K. Watanabe and H. Klostermeyer . 411

Serological studies on heat-induced interactions of α-lactalbumin and milk proteins. A. Baer, M. Oroz and B. Blanc 419

Heat stability characteristics of ovine, caprine and equine milks. P. F. Fox and M. C. T. Hoynes 433

Action of milk-clotting enzymes on β-caseins from buffalo's and cow's milk. Safinaz El-Shibiny and M. H. Abd El-Salam 443

Selection and some properties of phage-resistant starters for cheese-making. R. J. Marshall and N. J. Berridge 449

The effect of lipolytic Gram-negative psychrotrophs in stored milk on the development of rancidity in Cheddar cheese. B. A. Law, M. E. Sharpe and H. R. Chapman 459

Volatile compounds in butter oil. IV. Quantitative estimation of free fatty acids and free δ-lactones in butter oil by cold-finger molecular distillation. W. Stark, G. Urbach and J. S. Hamilton 469

PAGE

Volatile compounds in butter oil. V. The quantitative estimation of phenol, *o*-methoxyphenol, *m*- and *p*-cresol, indole and skatole by cold-finger molecular distillation. W. STARK, G. URBACH and J. S. HAMILTON 479

Enzymic methods for the estimation of the somatic cell count in bovine milk. II. N-acetyl-β-D-glucosaminidase test for routine estimation of the somatic cell count in milk. B. J. KITCHEN and G. MIDDLETON . . 491

The influence of naturally occurring levels of urea on the heat stability of bulk milk. D. D. MUIR and A. W. M. SWEETSUR 495

Review of the progress of Dairy Science: Calcium and phosphorus metabolism in ruminants with special reference to parturient paresis. G. D. BRAITHWAITE 501

Index of Subjects

Acetaldehyde, from glucose, lactic acid bacteria, 63
from threonine, lactic acid bacteria, 75
Amino acids, composition, milk-fat globule membrane proteins, 401
Autoxidation, *see* **Oxidation**

Bacteria, non-starter, Cheddar cheese, flavour, chemical composition, 117
psychrotrophic, Cheddar cheese, rancidity, 459
Blood, composition, protein content, diet, 357
leucocytes, acid phosphatases, mastitic milk, 127
Buffalo(es), milk, β-casein, milk-clotting enzymes, action, 443
electrical conductivity, temperature, influence, 321
milk-fat globule membrane proteins, composition, lactation, 381
Butter, *see also* **Milk fat**
fatty-acid composition, Reichert-Meissl, Polenske fractions, 137
flavour, volatile compounds, 469, 479
Butter oil, *see* **Dry butterfat**

Calcium, metabolism, ruminants (review), 501
salts, heat stability, forewarmed milk, 267
Carotene, content, colostrum, milk, pasture-fed cows, 229
Casein, dephosphorylation, alkaline phosphatase, milk, 19
micelles, heated, rennin action, role of α-lactalbumin, 331
native, rennet-treated, electrophoresis, 27
α_{s0}-Casein, preparation, characterization, 133
β-Casein, milk-clotting enzymes, action, buffalo's, cow's milk, 443
κ-Casein, chymosin-sensitive polypeptides, relationship, 37
heat stability, forewarmed milk, 267
Cell count, Coulter Counter, reliability, 371
enzymic methods, 251, 491
Cheddar cheese, curd, microstructures, comparison, calf rennet, bovine-, porcine-pepsin, used, 113
flavour, chemical composition, non-starter bacteria, 117
starter streptococci, contribution, 301
sulphur compounds, 313
microstructure, examination, scanning electron microscope, 109
proteolysis, rennet, starter proteases, 97
rancidity, psychrotrophic Gram-negative flora, 459
Cheese-making, *see also* **Cheddar cheese**
continuous processes (review), 337
starter, *see* **Starters**
Chymosin, *see* **Rennin**
Coagulation, milk protein, forewarmed, κ-casein, serum proteins, divalent cations, influence, 267
heated, caprine, equine, ovine, 433
urea content of milk, influence, 495
Colostrum, carotene, immunoglobulin, content, pasture-fed cows, 229
Concentrates, *see* **Diet**
Conductivity, electrical, milk, temperature, influence, 321
Coulter Counter, reliability, cell counts, milk, 371

Diet, *see also* **Nutrition**
fat-deficient, fatty acid suppplement, fatty acid composition, milk fat, 219
milk yield and composition, 213
protein content, milk yield, blood composition, 357
Disease, *see* **Mastitis**
Disulphide groups, levels, β-lactoglobulin A, 411
Dry butterfat, free fatty acids, free δ-lactones, estimation, 469
phenols, indoles, estimation, 479

Electrophoresis, whey proteins, quantitative measurement, 259
Enzymes, *see also* **Pepsins, Phosphatase(s), Proteases, Rennet(s), Rennin**
measured, for estimation, cell content, milk, 251, 491
milk-clotting, action on β-casein, buffalo's, cow's milk, 443
bovine rennets, 85
Escherichia coli, infection, lactating-, non-lactating udders, 205

Fatty acids, free, estimation, butter oil, 469
in concentrates, fatty acid composition, milk fat, 219
milk yield and composition, 213
linoleic acid, milk fat, fat-globule membrane, properties, 389
Flavour, butter, volatile compounds, 469, 479
Cheddar cheese, non-starter bacteria, contribution, 117
psychrotrophic Gram-negative flora, effect of, 459
starter streptococci, contribution, 301
sulphur compounds, 313

Glucose, precursor of acetaldehyde, lactic acid bacteria, 63
Goat(s), lactation, induction, perphenazine, 9
milk protein, heat stability, 433

Heat stability, *see* **Coagulation,** milk protein, forewarmed, heated

Immunoglobulin, content, colostrum, milk, pasture-fed cows, 229
Indoles, estimation, butter oil, 479

α-Lactalbumin, heat-induced interactions, milk proteins, 419
role, rennin action, heated casein micelles, 331
Lactation, induction, perphenazine, 9
stage, proteins, composition, milk-fat globule membrane, 381
Lactic acid bacteria, acetaldehyde formed, from glucose, 63
from threonine, 75
β-Lactoglobulin A, sulphydryl, disulphide levels, heat-induced changes, 411
δ-Lactones, estimation, butter oil, 469
Linoleic acid, high levels, milk, fat-globule membrane, properties, 389
milk fat, oxidation, 239

Magnesium salts, heat stability, forewarmed milk, 267
Mammary gland, *see also* **Udder**
isolated, acetate utilization, guinea-pig, 197
Mare(s), milk protein, heat stability, 433
Mastitis, acid phosphatases, leucocyte origin, milk, 127
Metabolism, Ca and P, ruminants (review), 501
Milk, acid phosphatases, leucocyte origin, 127
acidified, whey protein aggregation storage, 45
alkaline phosphatase, dephosphorylation, casein, 19
carotene, immunoglobulin, content, pasture-fed cows, 229
cell count, Coulter Counter, efficiency, factors, 371
effect of storage, 53
enzymic methods, 251, 491
coagulation, *see* **Coagulation**
electrical conductivity, temperature, influence, 321
Milk composition, ewes, 325
feeding concentrates containing fatty acids, 213
feeding frequency, 1
Milk fat, fatty acids, milk, feeding concentrates containing fatty acids, 219
globule membrane, properties, high-linoleic milk, 389
proteins, amino acid composition, 401
composition, lactation, 381
linoleic-acid rich, oxidation, 239
Milk fever, Ca and P metabolism (review), 501
Milk proteins, *see also* **Proteins**
amino acid composition, milk-fat globule membrane, 401
breakdown, *see* **Proteolysis**
composition, milk-fat globule membrane, lactation, 381
heat-induced interactions, α-lactalbumin, 419
heat stability, caprine, equine, ovine, 433
κ-casein, serum proteins, divalent cations, influence, 267
urea content of milk, influence, 495
Milk sampling, bulk milk, cell counts, Coulter Counter, efficiency, factors, 371
Milk serum proteins, *see* **Whey proteins**
Milk yield, feeding concentrates containing fatty acids, 213
feeding frequency, 1
protein content, diet, 357

Nutrition, *see also* **Diet**
feeding frequency, milk-yield, -composition, 1

Oxidation, milk fat, linoleic-acid rich, initiation, control, 239

Parturient paresis, *see* **Milk fever**
Pepsins, bovine, porcine, rennet, Cheddar cheese curd, manufacture, microstructures, comparison, 113
Peptides, poly-, chymosin-sensitive, κ-casein, relationship, 37
Perphenazine, lactation, induction, 9
Phenols, estimation, butter oil, 479
Phosphatase(s), acid, leucocytes, normal-, mastitic-milk, 127
alkaline, milk, dephosphorylation, casein, 19
Phosphorus, metabolism, ruminants (review), 501
Proteases, starter, rennet, proteolysis, Cheddar cheese, 97
Proteins, *see also* **Milk proteins**
intake, milk yield, blood composition, 357
whey, *see* **Whey proteins**
Proteolysis, Cheddar cheese, rennet, starter proteases, 97

Rancidity, Cheddar cheese, psychrotrophic Gram-negative flora, 459
Rennet(s), bovine, milk-clotting enzymes, 85
bovine-, porcine-pepsin, Cheddar cheese curd manufacture, microstructures, comparison, 113
starter proteases, proteolysis, Cheddar cheese, 97
-treated casein micelles, electrophoresis, 27
Rennin, action, casein micelles, heated, role of α-lactalbumin, 331

Sheep, milk, composition, 325
milk protein, heat stability, 433
Starters, amino acid nutrition, growth, peptone-supplemented whey media, 291
Cheddar cheese, flavour, 301
cheese, phage-resistant, 449
(review), 141
proteases, rennet, proteolysis, Cheddar cheese, 97
Storage, milk, acidified, whey proteins, aggregation, 45
electronic cell count, 53
Streptococci, starters, Cheddar cheese, flavour, 301
Streptococcus cremoris, autolysis, 275
extracellular carbohydrate, 283
Sulphydryl groups, levels, β-lactoglobulin A, 411

Thiel, C. C., retirement, 195
Threonine, cleavage of acetaldehyde, lactic acid bacteria, 75

Udder, *see also* **Mammary gland**
lactating, non-lactating, infection, *Escherichia coli*, 205
Urea, content, heat stability, milk, 495

Whey proteins, aggregation, acidified milk, stored, 45
heat stability, forewarmed milk, 267
quantitative measurement, 259
